

PORTABLE GAS DETECTORS

The Portable Gas Detector detects potentially dangerous propane, butane, acetylene and methane (natural gas) leaks. It is a light-weight, pocket-sized, portable gas detector. When butane, propane, acetylene or methane (natural gas) is detected at levels greater than 5% Lower Explosive Limit (LEL), this device emits an audible alarm and activates a three-stage LED indicator. This portable gas detector can be used to check potential gas leaks in pipes, fittings, valves, gas storage tanks, propane barbecue grills, home appliances and hot water heaters.

- Powered by two AA alkaline batteries (not included)
- No calibration required for the lifetime of the product
- Includes impact resistant, protective sensor cap
- Over molded elastomeric rubber provides a no-slip grip
- Senses low amounts of butane, propane, acetylene and methane (natural gas)
- Available in stock
